

Fully automatic fire sprinkler systems are widely regarded as the most effective method of controlling a fire. MICROLYNX designs, installs and commissions reliable, cost-effective sprinkler systems by carefully analysing a building and its contents in terms of occupancy, operation and fire risk. When you do business with MICROLYNX, you get a complete single-source solution fire sprinkler company. We offer efficient turnaround at every step, from design and installation through system acceptance and after-installation service. Whatever your application, we have the high-quality products and specialized expertise to meet your needs.

Whether a new fire sprinkler installation or a retrofit, we provide the competitive features that building managers want, and the ease of expansion and upgrade that protects your investment. Regardless of size, every MICROLYNX sprinkler system is installed by our own field crews. Professional project managers assure that installation proceeds according to specification, and is completed on time and on budget.

### **Water Spray Systems**

Designed to direct water to entirely impinge onto the hazard surface in applications such as transformers, turbines and flammable/combustible liquid hazards.

### **Water Mist Systems**

Using decreased droplet sizes results in less water needed compared with traditional sprinklers for protection of flammable liquid hazards, heritage buildings and machinery spaces.

We also design, install and maintain Fire Hydrants, Standpipe and Hose Systems.
